About

Senior Flutter Developer with over 4+ years of expertise, having independently developed and published 50+ mobile applications throughout my career, specializing in cross-platform Dart programming, full-cycle app development, and monetization strategies.

Skills

Mobile Development: Flutter | React | Kotlin.

State Mangement: GetX | Provider | Bloc | Riverpod.

IDE: Android Studio | Xcode | VsCode | Cursor.AI.

Tools: Jira | ClickUp | Clockingit | Slack | Git | Bit Bucket | Codemagic | Gitlab.

Experience

Senior Flutter Developer, Mirage Minds, Dubai, UAE

Aug 2024 – Present

- Published app achieving 50,000+ downloads with full platform policy compliance.
- Built hybrid monetization (subscriptions, in-app purchases, ads), driving 35% overall revenue increase with high user satisfaction.
- Developed MRR growth strategies via premium features and personalized offers, increasing recurring subscriptions by 30%.
- Integrated in-app purchases (subscriptions and digital goods) via RevenueCat, generating 25% of total revenue.
- Optimized AdMob ad placement, boosting revenue by 20% while preserving user experience.
- Implemented tiered subscription model with free trials, achieving 15% free-to-paid conversion and stable MRR growth.
- Led 7+ mobile app projects independently, handling ideation, development, and deployment with 100% platform compliance.
- Managed high-traffic app with 5,000+ active users, ensuring scalability and seamless maintenance.
- Reduced Flutter app bundle size by 80.7% (200MB to 25MB) via clean architecture.
- Refactored legacy Flutter app using clean architecture, cutting technical debt by 60% and improving performance by 35%.
- Added localizations with RTL support, increasing market reach by 10%.
- Integrated multiple payment gateways for secure global transactions.
- Set up CI/CD pipelines with Codemagic, reducing build times by 40% for Play Store and App Store.
- Leveraged Dart isolates for compute-intensive tasks, reducing app loading times by 45%.
- Ran background services and tasks in queues using isolates and WorkManager, eliminating UI freezes and enhancing responsiveness.
- Optimized heavy operations in isolates, lowering memory usage by 40% for 10,000+ daily active users.

Flutter Developer, DivsnPixel, Karachi, PK

May 2024 – July 2025

- Independently led 3 mobile app projects, managing ideation, development, and deployment with 100% platform compliance.
- Integrated GraphQL and REST APIs using HTTP Network Client for robust, efficient data operations.
- Implemented Google and social logins, improving onboarding by 25%.

Flutter Developer, Objectual System Limited, Karachi, PK

Sep 2023 – Apr 2024

- Independently led 2 mobile app projects, managing ideation, development, and deployment with 100% platform compliance.
- Developed in-app chat using GetStream SDK and Firebase Cloud, increasing user retention by 10%.
- Worked on CodeCanyon pre-made app scripts, customizing and integrating them to meet project-specific requirements.

Flutter Developer, Matz Solution, Karachi, PK

Dec 2022 – Aug 2023

- Independently led 2 mobile app projects, managing ideation, development, and deployment with 100% platform compliance.
- Configured FCM and Deep Linking, enhancing notification delivery and boosting user engagement by 20%.
- Integrated AdMob, increasing revenue by 15% through optimized ad placement and user-friendly design.
- Incorporated Stripe for secure, global payment processing, supporting diverse transaction needs.

Junior Flutter Developer, DivsnPixel, Karachi, PK

Dec 2021 – Aug 2022

- Created responsive UI components that adapt seamlessly across different device sizes.
- Integrated REST APIs in Flutter using HTTP.

Projects (Some of the projects are mentioned below)

TraitTrack

TraitTrack is a US-based medical app for tracking user traits. Users prioritize and approve traits, then access a tracking module to monitor them and provide ratings based on the approved traits. Upon completing tracking, users can view reports generated from their ratings in the report module. The app offers subscriptions: a 3-month plan allowing tracking of 4 traits, or an annual plan for 8 traits. Users can select payment methods, including Stripe. The app integrates FCM notifications and deep links for enhanced functionality.

PawDash

PawDash is a GCC app with two separate apps: one for users(PawDash) and another for riders/walkers(PawRides). The app facilitates pet delivery or pet walking services. Users can book a ride by selecting pickup and drop-off locations, and the order is automatically assigned to a nearby rider. For pet walks, users specify the duration, and the walk is automatically assigned to a walker. Users can choose Cash on Delivery (COD) or other supported payment methods, including MamoPay. The app integrates FCM notifications and deep links for enhanced functionality.

Pilgrims Serving App (Hide name due to to NDA)

It's a dedicated mobile application designed for pilgrims performing Hajj and Umrah through Holding Company in Saudi Arabia. It provides essential information on accommodations, daily schedules, holy sites (including Mena and Arafat), and planned activities to ensure a smooth spiritual journey. The app enables seamless communication with group leaders and representatives for real-time support and logistics assistance. With a focus on enhancing the pilgrimage experience, Ithraa delivers innovative, integrated services for an unforgettable and hassle-free Hajj season.

Doctor Appointment App (Hide name due to to NDA)

It's a cross-platform GCC Pilgrims Serving App with support for 8 languages and RTL, featuring separate apps for admins and users. Admins can manage user groups, their accommodations, activities, and send group notifications. Users can view their group's recent or upcoming activities and housing details. Both apps include a

Qibla compass and prayer timings sourced from a local SQLite database.

Ecommerce App (Hide name due to to NDA)

It's a cross-platform e-commerce app built with GCC, supporting RTL, featuring multiple stores and their products. Users can reserve items for in-store pickup, view store details, product posts, and updates. Payment options include Stripe, Google Pay, and Apple Pay. The app offers social login via Facebook, Google, and Apple, and integrates FCM notifications and deep links for enhanced functionality.

RepaiNet

Repairnet is a Canadian-based cross-platform app connecting users to a wide range of car repair shops. The app allows users to schedule appointments for various services, including car inspections, dent repairs, painting, and more. Users can choose a specific technician if they are familiar with one, or the shop will assign a technician by default.

MiJo Daily Planner

MiJo Daily Planner is a cross platform app that Helps manage and organize your tasks, goals, lists, and journals effortlessly. To do list for task management, journal, goals manager by Mi-Journal is simply a must have productivity a on every mobile device.

Money Transfer App (Hide name due to to NDA)

Its is a cross platform app that send money globally with ease! Our mobile app offers real-time rates, low fees, and 24/7 support. Quick, secure international transfers at your fingertips. Download now and transfer confidently..
